The present sequence is the CPP23beta or Glu190 isoform of the CP inactive CPP32 proenzyme (a member of the interleukin converting cenzyme/pro-apoptotic protein CED-3 family of cysteine proteases of CC unknown function cloned from Jurkat cells), the proteolytic product CC of which is the poly(DP-ribose) polymerase (PARP) protease, apopain. The PARP cleavage enzyme was purified from the human CC monocytic leukaemia cell line, THP-1, using standard ion exchange CC chromatography techniques and SDS PAGE. Apopain can be used to CC identify apopain activity modulators, while apopain encoding DNA CC may be used for apopain production or in gene therapy (i.e. in vivo CC or ex vivo gene transplantation) for enhancing the pro-inflammatory CC or pro-apoptotic effects of apopain. Anti-apopain antibodies and CC antisense DNA can be used to reduce or eliminate the CC of apopain activity is beneficial in the treatment of immune, CC disease, pathogenic infections, cardiovascular and neurological continuous and neurological infections, cardiovascular and neurological and particon's
